

The Cookpal Titanium Pot uses titanium to prioritize lightness, making it easy to handle for everyday use.

The pot body is made of titanium (except bottom) and is lightweight, reducing the burden of daily cooking.

Stronger than iron or aluminum, and extremely durable.

Highly corrosion-resistant material that is strong against sodium chloride exposure and is resistant to rust.

The bottom is covered with magnetic 18cr stainless steel encasing aluminum with excellent heat conductivity. The quickly heated aluminum's heat is guarded by heat-retentive stainless steel, delivering high heat storage efficiency.

This product includes a specially designed silicone ladle.

Silicone ladles come with measurement markings for convenient portioning.

•Please use the included silicone ladle. If a metal ladle or other cooking utensils are used, the interior of the pot may become scratched.
